Art Unit: 2676

### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

- 1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
  - A person shall be entitled to a patent unless (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claim(s) 1, 2, 7-13, 20-23 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,455,958 to Flurry et al.
  - a. Regarding claim 1, Flurry et al. discloses a graphics-rendering engine (X Server program module 14, Fig. 1...as a display resource manager...col. 4, lines 14-44) to concurrently render two or more independent images for display on multiple display devices (...this invention is designed to function with several display devices connected to it...col. 5, lines 25-30) and a graphics context manager (rendering context manager (RCM) 22, Fig. 1) (...initially, Client B 18 and Client C 20,...access the X Server 14 in order to have display device resources...allocated to them...these accesses are performed in a manner that allows the client B 18 and Client C 20 to exist independently of each other...col. 4, lines 14-44...the rendering context manager (RCM) 22 is to ensure that as it permits each applications program to access the display device, it also places on the display device the proper rendering context, or environment, for that applications program...col. 5, lines 6-25) to store in a first memory area and restore from the first memory area information describing a first rendering context associated with the first independent image, the graphics context manager to store in a second memory area and restore from the second memory area information describing a second rendering context associated with the second independent image (...each entry in the domain array 70

Page 3

Application/Control Number: 09/895,777

Art Unit: 2676

contains a link to the device process...RCM 22 can authorize access to independent domains of display devices independently...a device domain is an environment within the device to which a graphics process is providing data...col. 7, lines 1-65).

- b. Regarding claim 2, Flurry et al. **discloses** as shown above a plurality of memory areas, each memory area to store a rendering context associated with the instructions from a particular graphics application;; and a plurality of context identification registers including a first context identification register and second context identification register, the first context identification register contains information to point to an address of the first memory area, the second context identification register contains information to point to an address of the second memory area (...Fig. 3 is a flow chart...in step 700, the rendering context manager saves the user mode environment (such as...registers and the stack)...col. 6, lines 34-67).
- c. Regarding claim 7, Flurry et al. **discloses** the first memory area to contain instructions for the two or more independent images in a first instruction stream (...the rendering context manager 22 provides...ensuring that only one of the processes wishing to access the display device...can do so at any given time, and...switching the display device rendering contexts required by the applications programs...col. 5, lines 6-24).
- d. Regarding claim 8, it is similar in scope to claim 7 above and is rejected under the same rationale.
- e. Regarding claim 9, it is similar in scope to claim 7 above and is rejected under the same rationale.
- f. Regarding claim 10, Flurry et al. **discloses** a single display device 12 is connected to the RCM 22 (col. 5, lines 25-30).
- g. Regarding claims 11 and 12, Flurry et al. **discloses** an instruction memory area (RCM common 50, Fig. 5); registers to define a start and an end to the instruction

Art Unit: 2676

memory area (element 32, Fig. 2) and a memory access engine (RCM 22) to fetch and deliver the instructions from the instruction memory area (element 32) to the graphics-rendering engine; and a third memory area (domain array 70, Fig. 5) that can be invoked from an instruction stream.

- h. Regarding claim 13, Flurry et al. **discloses** a time allocator (RCM 22, Fig. 1; col. 4, lines 14-44).
- i. Regarding claim 20, Flurry et al. **discloses** displaying the multiple independent images on single display device (Fig. 1).
- j. Regarding claim 21, it is similar in scope to claim 1 above and is rejected under the same rationale.
- k. Regarding claim 22, it is similar in scope to claim 13 above and is rejected under the same rationale.
- l. Regarding claim 23, Flurry et al. **discloses** a time allocator controlling the input to the graphics-rendering engine (Fig. 3).

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claim(s) 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,455,958 to Flurry et al.
  - a. Regarding claim 3, Flurry et al. **discloses** registers and saves the stack (Fig. 3). Flurry et al. **does not explicitly disclose** a third register to track which memory area in the plurality of memory areas contains the rendering context information to be

Art Unit: 2676

supplied to the graphics-rendering engine. However, it would have been obvious to a person of ordinary skill in the art at the time invention was made to include such a register **because** it would improve the efficiency of rendering context manager.

- 5. Claim(s) 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,455,958 to Flurry et al. as applied to claim 3 above, and further in view of U.S. Patent No. 5,703,806 to Puar et al.
  - a. Regarding claim 4, Flurry et al. **does not disclose** a first memory area being located on the same chip containing the graphics-rendering engine. Puar et al. **discloses** a graphics controller function being integrated on the same chip as the memory (col. 2, lines 58-67). It would have been obvious to a person of ordinary skill in the art at the time invention was made to modify Flurry et al. with the feature "memory and graphics-rendering engine on the same chip" as taught by Puar et al. **because** it provides for low power consumption, and low pin and package counts thus resulting in cost savings.
- 6. Claim(s) 14, 16-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,455,958 to Flurry et al. as applied to claim 2 above, and further in view of U.S. Patent No. 6,311,204 to Mills.
  - a. Regarding claim 14, Flurry **fails to suggest** a plurality of registers having a plurality of fields wherein a first field that determines whether the first register participates in an arbitration process to use the graphics rendering engine and a second field to point to a memory allocation. Mills. **discloses** processing system with register-based process sharing. The acquire bit portion 352 (Fig. 9A) of the semaphore register 350 indicates other processes when it engages the drawing acceleration engine similar to the instant claim where a first field indicates whether the first register will participate in using the graphics engine (col. 27, lines 18-63). The process identifier portion 354 of the

Art Unit: 2676

instructions from a first instruction stream. This is not explicitly discloses but such operation falls within the realm of fetching instructions being pointed to by a process identifier portion of the semaphore register. Therefore, it would have been obvious to a person of ordinary skill in the art at the time invention was made to modify the device as taught by Flurry et al. with the feature "register-based process sharing" as taught by Mills **because** this would result in improved efficiency and reduce cost and complexity.

- b. Regarding claim 16, wherein a first module directs the graphics-rendering engine to process instructions stored in a first memory having an address defined by information contained in the plurality of the fields, this is implicitly taught by Mills as described above (fetching instructions being pointed to by a process identifier portion of the semaphore register) (col. 27, lines 18-63).
- c. Regarding claim 17, it is similar in scope to claim 1 above and is rejected under the same rationale.
- d. Regarding claim 18, Flurry et al. **discloses** RCM setting up a timer for each domain and registers the timer handler with the kernel similar to the instant claim 3 where programmable elapsed period of time to use the graphics engine (col. 9, lines 20-30.
- 7. Claim(s) 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,455,958 to Flurry et al. as applied to claim 2 above, and further in view of U.S. Patent No. 6,252,600 B1 to Kohli et al.
  - a. Regarding claim 5, Flurry et al. **does not disclose** a two dimensional and three dimensional image being processed. Kohli et al. **discloses** a graphics context mangagement arrangement that involves two dimensional and three dimensional image processing (col. 4, lines 46-67; Fig. 3). Therefore, it would have been obvious to a person

Art Unit: 2676

of ordinary skill in the art at the time invention was made to modify Flurry et al. with the feature "two and three dimensional processes in a graphics context management" as taught by Kohli et al. **because** it provides for minimum pipeline latency associate with context switching (col. 2, lines 35-40).

e. Regarding claim 6, it is similar in scope to claim 5 above and is rejected under the same rationale.

## Allowable Subject Matter

8. Claim(s) 15 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Dalip K. Singh** whose telephone number is **(703) 305-3895**. The examiner can normally be reached on Mon-Thu (8:00AM-6: 30PM) Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Matthew Bella**, can be reached at **(703) 308-6829**.

### Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

### or faxed to:

## (703) 872-9314 (for Technology Center 2600 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

Art Unit: 2676

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.
